DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see p.13, filed 01/23/07, with respect to claims 1-4,7-11,13,32-36 and 38 have been fully considered and are persuasive. The 103(a) rejection of the claims has been withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the claim recites "In an input/output circuit of a process control system.... the improvement...". The claim appears to be an apparatus claim, however, does not further recite any elements in the circuit, but recites which appears to be a method step of transferring a FSK signal encoded in a PWM signal. Hence, it is unclear whether the claim is an apparatus claim or a method claim.

Claims 2-6 directly or indirectly depend on claim 1.

Allowable Subject Matter

3. Claims 7-30,32-50 and 55-57 are allowed.

Art Unit: 2611

4. Claims 1-6 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. The following is a statement of reasons for the indication of allowable subject matter:

Present application discloses a method and an apparatus of an input/output circuit having a transformer processing a signal, wherein the signal is FSK signal converted to or encoded in a pulse width modulated signal. However, prior art does not explicitly teach wherein the FSK signal is converted to the PWM signal, the PWM signal having pulses of its widths are based on the FSK signal applied to the transformer.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fischer US 4,533,874 teaches a system of converting an FSK signal to a PWM signal.
